EDUCATION AND CERTIFICATES

Honours BA, Computer Science (Co-op), York University

Sept 2023 – Apr 2027 (Expected)

Machine Learning Specialization, Stanford University & DeepLearning.AI

In Progress

Python for Data Science and AI, IBM

Jan 2026

EXPERIENCE

Software Developer Intern

May 2025 – Aug 2025

Nova Ventures

Toronto, ON

- Developed backend API endpoints using Python and FastAPI for a goalkeeper performance analytics platform used by competitive soccer teams
- Parsed and cleaned match data from PDFs and spreadsheets sent by partner clubs, transforming raw stats into structured database tables for performance analysis
- Created interactive heatmap components in React that visualized save patterns by goal zone, helping coaches pinpoint areas for targeted training

App Developer & Database Intern

Mar 2024 – Aug 2024

Sepantech

Sweden

- Built core features for a course management platform serving 500+ medical professionals across Sweden, supporting enrollment, progress tracking, and automated certification
- Designed and structured 6+ database tables in MySQL and optimized 12+ queries, reducing average response time by 30%
- Developed 8+ backend API endpoints using Node.js in an Agile team for features including user login, enrollment processing, and automatic certificate generation

PROJECTS

BowlWise ([bowlwise.app](#))

React, FastAPI, MongoDB, Python, Docker

- Built and launched a dog food recommendation platform now live in 2 PetValu retail locations, helping pet owners find safe, personalized food matches from a catalog of 150 products across 6 brands
- Designed a 100-point scoring algorithm based on veterinary nutrition standards that evaluates and ranks all 150 products for each pet profile in under 10ms, replacing manual staff recommendations with consistent, data-driven results
- Engineered an allergen safety system that cross-references pet allergy profiles against ingredient lists across 18 categories, automatically filtering unsafe products before they reach the owner
- Developed 19 backend API endpoints using FastAPI with secure user authentication and per-endpoint rate limiting, supporting production traffic across multiple store locations
- Configured an automated testing and deployment pipeline with 23 tests across 5 suites, enabling zero-downtime production deploys through GitHub Actions and Docker
- Created a custom data pipeline to extract and validate 32 nutritional fields per product from retailer websites where no public data feeds existed, building the product database from scratch
- Developed the user-facing application in React with a 7-step guided form, product detail overlays, real-time feeding calculator, and side-by-side comparison tool, scoring 95 on Lighthouse performance

WealthTrack ([GitHub](#))

React Native, Node.js, TypeScript, PostgreSQL, Prisma

- Built a cross-platform mobile investment tracker using React Native and Node.js that enables users to monitor stocks, crypto, and ETFs in one place with real-time pricing and portfolio performance insights
- Integrated Yahoo Finance and CoinGecko APIs across 13 RESTful endpoints with JWT authentication, implementing a database-backed cache that reduced external API calls by 95%
- Implemented 19 portfolio analytics metrics including volatility calculation, risk scoring, and diversification scoring with high-precision decimal handling across 5 asset types
- Designed and structured a PostgreSQL database using Prisma ORM to store user portfolios, transaction history, and cached market data with support for 37 tickers

SKILLS

Languages	Python, JavaScript, TypeScript, Java, C, SQL, HTML/CSS
Frameworks	React, React Native, Node.js, Express, FastAPI, Spring Boot, Pydantic
Libraries	pandas, NumPy, BeautifulSoup4, Axios
Databases	PostgreSQL, MongoDB, MySQL
Tools	Git, Docker, GitHub Actions, Linux, Postman, Jupyter, Railway, Vercel, Figma
