EDUCATION AND CERTIFICATES

Honours BA, Computer Science (Co-op), York University	Sept 2023 – Apr 2027 (Expected)
Machine Learning Specialization, Stanford University & DeepLearning.AI	In Progress
Python for Data Science and AI, IBM	Jan 2026

EXPERIENCE

Software Developer Intern	May 2025 – Aug 2025
Nova Ventures	Toronto, ON
- Built backend API endpoints in Python and FastAPI for a goalkeeper analytics platform, exposing per-session performance data to the coaching dashboard - Built a data pipeline that parsed and cleaned match stats from club PDFs and spreadsheets into structured database tables for analysis - Built interactive React heatmap components that visualized save patterns across goal zones	
App Developer & Database Intern	May 2024 – Aug 2024
Sepantech	Sweden
- Built core features for a course-management platform serving 500+ medical professionals, including enrollment and automated certification - Designed 6+ MySQL tables and optimized 12+ queries, cutting average response time by 30% - Built 8+ Node.js API endpoints in an Agile team for authentication, enrollment, and certificate generation	

PROJECTS

BowlWise (bowlwise.app)	React, FastAPI, MongoDB, Python, Pydantic, Docker
- Solo-built and launched a full-stack dog food recommendation platform now live on customer tablets in 2 PetValu retail stores, owning frontend, backend, database, and deployment end-to-end - Built the React frontend, including a 7-step guided profile form, product-detail overlays, a feeding calculator, and a side-by-side comparison tool tuned for in-store tablets - Built 20 FastAPI endpoints over a 4-collection MongoDB schema, with magic-link authentication, rate limiting, and 61 automated tests	
MoneyMind (GitHub)	Next.js, React, FastAPI, MongoDB Atlas, LangGraph, Gemini
- Architected a three-layer system (Next.js, FastAPI, MongoDB Atlas) for an AI personal-finance agent as architecture lead on a 3-person team for the Google Cloud Agent Hackathon - Built and verified an end-to-end streaming pipeline (Next.js → FastAPI → LangGraph agent → Atlas → Gemini) delivering token-by-token responses from a user's real transaction data - Built the agent service in FastAPI and designed the MongoDB Atlas schema and 1024-dim vector index the rest of the stack runs on	
Maridian (Live Demo)	Next.js, React, Python, FastAPI, Pydantic, SQLite
- Led the technical build of a six-agent AI system end to end as technical lead on a 5-person team, owning the architecture, API contract, deployment, and the operator-facing UI; demoed at the TMLS 2026 Agentic AI Hackathon - Developed and polished the operator and distributor web portals, a five-page interface where factory staff review flagged defects, view the AI's recommended action, and approve customer status updates - Diagnosed and fixed a production outage that was failing every API route, tracing it to a database path resolving outside the deploy directory and shipping a fix that restored the live service	

SKILLS

Languages	Python, JavaScript, TypeScript, SQL, Java, C, HTML/CSS
Frameworks	React, Next.js, FastAPI, Pydantic, Node.js, Express, Tailwind
Databases	MongoDB Atlas, PostgreSQL, MySQL, SQLite
AI/ML	LangGraph, Anthropic Claude API, Gemini, Atlas Vector Search, pandas, NumPy
Tools	Git, Docker, GitHub Actions, Linux, Postman, Figma, Railway, Vercel
